Random Forest Expected−Treatment Fit: Observed Z vs Out−of−Bag Predicted E[Z | X]
500−tree Random Forest across 19 pre−treatment covariates on training set (N = 301 country−waves, 98 countries)
Scaling A: Z_cont_10pp (OOB R2 = 0.51, CV R2 = 0.26)
Scaling B: Z_cont_log25pct (OOB R2 = 0.51, CV R2 = 0.24)
Observed Continuous Treatment Z_i,t
Random Forest Out−of−Bag Expected Treatment z_hat(X_i,t) = E[Z_i,t | X_i,t]
