A. Standardised Posterior Residuals Across Continuous University Funding Dose Z (+10−Year Horizon, N = 283)

93.6% to 95.8% of standardised residuals fall within [−2, +2] SD (dashed lines); flat LOESS curves confirm zero unmodelled dose curvature

B. Out−of−Sample Error (CRPS & RMSE) Across 5−Fold Country−Blocked Cross−Validation (112 Countries)

Each country held out in entirety across 5 stratified country folds; Continuous MV−BCF achieves lowest overall CRPS (2.33 vs 2.45−2.64)

C. Unseen Holdout Countries (Fold 5): Predicted vs Observed 10−Year Changes on 22 Unseen Test Countries

Out−of−sample country−mean predictions with 80% predictive intervals (83.3%−85.2% empirical 80% coverage; 94.4% empirical 95% coverage)
