A. Posterior Continuous Slopes Under Scaling A (+10 pp Ratio) vs Scaling B (+25% Relative Log)

Mediator−removed direct effect (M2) posterior mean slopes (pp per dose unit) with 80% and 95% credible intervals

B. Standardised Posterior Residuals Across Continuous Dose Z: Scaling A vs Scaling B (+10−Year Horizon, N = 283)

Both scalings exhibit flat zero−centred LOESS curves across Z in [0, 3.0] and 93.3% to 95.8% of residuals within [−2, +2] SD

C. Unseen Holdout Countries (Fold 5): Scaling A vs Scaling B Out−of−Sample Predictions (+10−Year Income Tax Share)

Out−of−sample country−mean predictions with 80% predictive intervals across 22 unseen countries (dashed line = 45−degree parity)
