1. Four Ways of Measuring University Funding (Z1 to Z4)
(Tested in turn across models)
Z1: Per−Student Spending Ratio (% of GDP per person)
Z2: 5−Year Spending Change (within−country change in Z1)
Z3: Real Dollars per Student (2021 PPP $, log scale)
Z4: University Budget Share (% of total GDP)
2A. Starting Country Context (X) (Measured Before Funding)
* Starting GDP & Tax Structure
* Prior 5−Year Economic Growth
* University & School Enrolment
* Demographics & Inequality
* Predicted Funding from History
2B. Follow−Up Macro Controls (X) (During 5− & 10−Year Window)
* Overall GDP per Person Growth
* Growth in Student Numbers
* Income Inequality Changes
* Life Expectancy Changes
3. Four Future Tax Outcomes (Y1 to Y4, Modelled Jointly)
(Estimated together at +5y & +10y)
Y1: Total Non−Resource Tax (% of GDP)
Y2: Direct Income & Profit Tax (% of GDP)
Y3: Direct Income Tax Share (% of Total Tax Revenue)
Y4: Goods & Services Tax Share (% of Total Tax Revenue)
